Hiring Manager RelationalAI

Dear Hiring Manager,

I am excited to apply for the Senior Performance Software Engineer position at RelationalAI. With over seven years of experience in performance engineering, particularly within large-scale data systems, I am eager to contribute my expertise in building advanced profiling and observability infrastructure to enhance system performance. Your commitment to redefining how AI learns from data resonates with my passion for creating trustworthy decision intelligence that drives better business outcomes.

In my current role at Kiran Engineering Works, I have successfully developed machine learning dashboards that improved response times by 40% and implemented retrieval-augmented generation (RAG) assistants that cut lookup times by 70%. My hands-on experience with distributed tracing and observability tools, including Datadog and Honeycomb, has equipped me with the skills to identify and resolve performance bottlenecks effectively. I have also designed and implemented a distributed tracing system that led to a 30% reduction in troubleshooting time, aligning perfectly with the performance-oriented culture you are fostering at RelationalAI. Collaborating with cross-functional teams has always been a priority for me, and I am committed to driving customer-centric outcomes while maintaining a high standard of empathy and collaboration.

I am enthusiastic about the opportunity to join RelationalAI and contribute to building the reasoning layer for modern enterprises. I look forward to the possibility of discussing how my background and skills can help advance your mission of delivering explainable and aligned intelligence. Thank you for considering my application.

Sincerely,

Parmeet Singh
