Dear RelationalAI Team,

I am excited to apply for the Senior Performance Software Engineer position at RelationalAI. With over seven years of experience in performance engineering and a strong focus on large-scale data systems, I am driven by the opportunity to contribute to your mission of enhancing the understanding of enterprise AI through innovative technologies like Superalignment. I am particularly drawn to your commitment to creating trustworthy decision intelligence that is both explainable and aligned with business needs.

In my previous role, I successfully led a team in implementing a distributed tracing and observability framework using Datadog, which resulted in a 30% reduction in system latency and improved overall performance metrics. My extensive hands-on experience with performance engineering methodologies, coupled with a deep understanding of distributed computing systems, has equipped me with the skills necessary to identify and resolve performance bottlenecks effectively. I thrive in collaborative environments and have a proven track record of working closely with cross-functional teams to drive customer-centric outcomes, ensuring that performance remains a top priority throughout the engineering process.

I am eager to bring my proactive problem-solving approach and technical excellence to RelationalAI, where I can contribute to building advanced profiling and observability infrastructure while fostering a performance-oriented culture. I look forward to the opportunity to discuss how my background and skills align with the goals of your team. Thank you for considering my application.

Sincerely, Parmeet Singh Email: parmeet.singh@parmeetsingh.com Phone: +91 74200 04161
