Dear RelationalAI Team,

I am excited to apply for the Senior Performance Software Engineer position at RelationalAI. With over seven years of experience in performance engineering and a strong background in large-scale data systems, I am eager to contribute to your mission of enhancing AI's understanding of enterprise contexts through innovative technologies like Superalignment and relational knowledge graphs. Your commitment to delivering trustworthy decision intelligence resonates with my professional values and aspirations.

In my previous role at a leading tech firm, I successfully led a performance optimization project that increased system throughput by 40% while reducing latency by 30%. This achievement was driven by my expertise in distributed tracing and observability tools, where I utilized Datadog to identify bottlenecks and implement effective solutions. I am adept at collaborating with cross-functional teams to foster a performance-oriented culture, and I thrive in environments that challenge me to explore and resolve complex system components. My hands-on experience with profiling tools and a deep understanding of distributed computing systems align well with the responsibilities outlined in your job description.

I am looking forward to the opportunity to bring my proactive problem-solving skills and technical excellence to RelationalAI. I am particularly excited about the prospect of contributing to the design reviews and performance engineering initiatives that will shape the future of enterprise AI. Thank you for considering my application; I am eager to discuss how my background and vision align with the innovative work at RelationalAI.

Sincerely, Parmeet Singh Email: parmeet.singh@parmeetsingh.com Phone: +91 74200 04161
